

Meaningful Use of EMR requirements and incentives, the ICD-10 standard and deadline, and the Patient Protection and Affordable Care Act (PPACA) are just a few examples of the regulatory, market condition and cost/quality improvement demands being placed on the healthcare industry. Solutions to these demands are largely enabled via technology, and are continuing to add challenges across the healthcare ecosystem.

GTS has successfully worked with a number of organizations in this ecosystem and continues to position its Healthcare IT Consulting practice to meet these challenges on behalf of our Clients.

Our Healthcare IT Consulting capabilities include:

- Deep functional knowledge of the healthcare industry: Meaningful Use, ICD-10, EMR, Mobile Health, Healthcare Information Exchange (HIE), Healthcare BI/Big Data
- Extensive pool of IT talent across various roles (Project Managers, Business Analysts, Technical Analysts, Application Developers, Infrastructure Technicians), ALL with direct experience in the healthcare industry (providers, payors, benefit managers and clinical services firms)

## CASE STUDIES

A GTS team of IT consultants served as an outsourced arm of a large health care consortium here in the Chicago area. Under the Client's management, the team was responsible for the desktop refresh effort across the enterprise. Utilizing our "contract-to-hire" staffing solution, this Client hired over 15 GTS contract professionals to their permanent staff.

A large healthcare system in the Chicago market needed additional IT infrastructure and Project Management resources to implement an EMR upgrade. GTS supplied a team of qualified IT consultants to successfully implement EMR capabilities.

A leading healthcare system in the Chicago market needed additional IT assistance to achieve Meaningful Use (MU) requirements/standards (Stage 1 and Stage 2), across all in-patient and ambulatory facilities. A team of GTS consultants was assembled to drive the rollout of EMR technology, system access, terminals and other access points for electronic patient information in order to achieve MU per federal standards.

## TESTIMONIAL

"GTS has been our preferred business partner for IT staff augmentation and full time staff placement on a number of key roles. GTS consistently exceeds our expectations and most of all they are very flexible in working with us through our ongoing business changes. With GTS we get the best quality, cost and service, a combination that is not easy to get with other firms."

IT Director, Healthcare Provider
